Centipede and St. Augustine Lawn Care Program Schedule

Service & Timing	What We Apply	What You Should Do	What To Expect	Benefits
<b>Round 1</b> Jan - Mar	A pre-emergent herbicide is applied to help prevent germination of summer grassy weeds such as crabgrass.	Stay off lawn until dry. Read comments and suggestions left by the lawn technician.	The benefit is long-term, and the customer won't notice immediate changes	Germination of summer grassy weeds such as crabgrass will be reduced.
<b>Round 2</b> Mar - Apr	A second pre-emergent herbicide is applied to help prevent germination of summer grassy weeds. A post-emergent herbicide is applied to any visible weeds.	Stay off lawn until dry. Read comments and suggestions left by the lawn technician.	Visible weeds should curl and turn brown after about 10 - 14 days.	Visible weeds should be reduced within 2 weeks. Germination of summer grassy weeds such as crabgrass will be reduced.
<b>Round 3</b> May - Jun	We apply high nitrogen fertilizer with balanced potassium and phosphorus to promote a quick green-up and recovery from winter stress. We also spot treat for weeds and fescue in cooler weather and apply weed control as it becomes hot.	Stay off lawn until dry. Read comments and suggestions left by the lawn technician.	Turf should become visibly greener. Weeds should curl and turn brown after about 10 - 14 days.	Turf density and vigor is improved. A dense healthy turf will discourage weeds and crabgrass.
<b>Round 4</b> Jun - Jul	We apply low nitrogen fertilizer with an iron supplement for color and spot treat for weeds.	Stay off lawn until dry. Read comments and suggestions left by the lawn technician.	Turf should become visibly greener. Weeds should curl and turn brown after about 10 - 14 days.	Turf density and vigor is improved. A dense healthy turf will discourage weeds and crabgrass.
<b>Round 5</b> Jul - Sep	We apply low nitrogen fertilizer with an iron supplement for color and spot treat for weeds.	Stay off lawn until dry. Read comments and suggestions left by the lawn technician.	Weeds should curl and turn brown after about 10 - 14 days.	Visible weeds should be reduced within 2 weeks. Germination of Winter & Spring broadleaf weeds such as dandelion will be reduced.
<b>Round 6</b> Sep - Oct	Pre-emergent herbicide is applied to help prevent germination of broadleaf weeds that would normally appear in the Spring. Post-emergent herbicide is applied to any visible weeds.	Stay off lawn until dry. Read comments and suggestions left by the lawn technician.	The benefit is long-term, and the customer won't notice immediate changes	Germination of Winter & Spring broadleaf weeds such as dandelion will be reduced.
<b>Round 7</b> Oct - Nov	Pre-emergent herbicide is applied to help prevent germination of broadleaf weeds that would normally appear in the Spring. Post-emergent herbicide is applied to any visible weeds.	Stay off lawn until dry. Read comments and suggestions left by the lawn technician.	The benefit is long-term, and the customer won't notice immediate changes	Germination of Winter & Spring broadleaf weeds such as dandelion will be reduced.
<b>Round 8</b> Nov - Dec	Potassium is applied to promote root development going into winter.	Read comments and suggestions left by the lawn technician.	The benefit is long-term, and the customer won't notice immediate changes	Improved root development
